SAMPLE ONLY — FICTIONAL DATA

My Headache Experience Journal: Patient Report

Demographics: Fictional patient A. No real personal information.

Reporting period: 1–30 October 2026. Completed episodes only.

Frequency: 6 completed episodes on 5 days; 18 hours total; average intensity 6.2/10.

Medication intake: pain medicine on 3 recorded days. Below the 15 days/month counter threshold; not a diagnosis.

Example episode: 24 October 2026; intensity 7/10; duration 180 minutes; left temple and left back of head.

Symptoms: light sensitivity. Reported trigger: missed meal. Treatment: Pain medicine and rest. Notes: fictional example.

1 - Left temple (Origin)

First selected: 09:00 UTC; intensity 7/10. Triggers: Missed meal.

Pain medicine at 30 minutes; relief at 60 minutes; outcome: partially effective.

2 - Left back of head

First selected: 09:20 UTC; intensity 5/10. Triggers: Reported neck tension.

Rest at 45 minutes; relief and outcome not recorded.

SAMPLE ONLY — FICTIONAL DATA

Screening and interpretation

S — Systemic symptoms / signs: screened, not detected.

Fever, chills, night sweats, unexplained weight loss, stiff neck or new rash accompanying the headache.

N — Neurological symptoms or signs: screened, not detected.

Weakness, numbness, speech difficulty, confusion or vision changes, with or without sudden onset.

O — Onset — sudden / thunderclap: screened, not detected.

Headache reaching peak intensity in under one minute, and whether it was the worst headache ever experienced.

O — Older age at onset (>50): screened, not detected.

First-ever headache beginning after age 50, derived from the recorded date of birth.

P — Pattern change / progression: screened, not detected.

Headache that differs from the usual pattern, and whether it is progressively worsening over days or weeks.

P — Positional / precipitated by Valsalva: screened, not detected.

Headache worse when lying down or standing, or provoked by coughing, straining or exertion; papilledema if known.

Treatment response & interpretation

Treatment response: one partial outcome shown; one missing outcome excluded. No effectiveness percentage or statistical association is inferred from this example.

First-selection timestamps reflect when areas were logged; they are not proof of the biological spread of pain.

Informational only. Not medical advice or a diagnosis. Seek urgent medical attention for new severe or concerning symptoms.
